## CATTLE PROTOCOL

### SHOW AND SALE CATTLE REGIMEN

#### LEVEL 1

The Vita Charge® Stress Tub provides a convenient way to administer Vita Charge and Bio MOS. These two products together help stimulate appetite and improve health. The Stress Tub is ideal to use during weaning, halter breaking or at times when cattle aren't being brought into the barn daily.

#### LEVEL 2

Administer 15 mL of Vita Charge paste or 30 mL of Vita Charge drench for three consecutive days prior to departure to show or sale. As soon as the cattle get off the trailer, administer an additional dose of paste or drench. Continue to administer Vita Charge daily while at the show. If your cattle are not drinking, add Vita Charge Liquid Drench to your water bucket to stimulate intake.

#### LEVEL 3

On a weekly basis, give 15 mL of Vita Charge paste twice a week, and 30 mL of drench once a week. The week prior to the show give 15 mL of the paste daily, and 30 mL of the drench every third day. Continue to administer Vita Charge daily while at the show, and use Vita Charge Liquid Boost in water buckets to keep cattle drinking.

### RECEIVING PERIOD

Provide one Vita Charge Stress Tub for 5-15 head of cattle. Consumption should be 1/4 lb. to 1/2 lb. a day.

If possible, administer Vita Charge to cattle before hauling to ensure appetite will stay consistent upon arrival.

Anytime cattle are run through a chute, whether it is for vaccination, treating illness, bloat or stressful situations, consider giving Vita Charge via a bolus, paste or drench.

Remember that all Vita Charge products are designed to work with Sure Champ® pellets and VitaFerm® mineral. Using these products in conjunction will help create maximum results.
